

CAPRYLATE

PRODUCT INFORMATION

Each capsule provides:

Calcium caprylate	492mg
Magnesium caprylate	356mg

INGREDIENTS: calcium caprylate, magnesium caprylate, vegetarian capsule shell, hydroxypropyl methylcellulose (HPMC), anti-caking agent: magnesium stearate (vegetable source), anti-caking agent: silicon dioxide

DIRECTIONS: Take 1 capsule, 3 times per day or as advised.

CAPRYLIC ACID

Caprylic acid is a type of beneficial saturated fatty acid that has antibacterial, antiviral, antifungal and anti-inflammatory properties. Found in healing foods like coconut and coconut oil, cow's milk, and human breast milk, it's been linked to prevention of urinary tract infections, bladder infections, Candida virus, sexually transmitted diseases, oral infections like gingivitis and many other conditions.

One of the three primary fatty acids

As one of the three primary fatty acids (along with capric acid and lauric acid) found in coconut oil, caprylic acid has recently become widely known for its antifungal effects, especially in regard to keeping the digestive and reproductive organs — including the bladder, gut and urethra — functioning properly.

One of the most popular uses for caprylic oil, whether consumed as part of foods or taken orally in tablet form, is preventing the overgrowth of yeast-like fungus that can live and grow in your intestines.

As a saturated fatty acid, caprylic acid (also sometimes called octanoic acid) contains eight carbon atoms, making it a medium-chain fatty acid (MCFA). While more research is still needed to confirm its potential uses, research suggests caprylic acid has positive applications for fighting inflammation, cancer, age-related cognitive decline including Alzheimer's disease, autism and circulatory problems.

6 BENEFITS OF CAPRYLIC ACID

① Contains Antibacterial, Antiviral and Antifungal Properties

As a natural immune-booster, caprylic acid is commonly used as an ingredient in topical fungicides, household cleaners, perfumes and dyes. Considering all the known coconut oil uses there are, it's not surprising that caprylic acid is gaining popularity on its own for healing the body inside and out.

Taken internally, it helps naturally reduce yeast growth within the gastrointestinal tract while helping beneficial bacteria thrive. At the same time, caprylic acid is completely natural and doesn't pose the same risks as harsh antibiotics or chemical treatments. While antibiotics can kill off all bacteria in the gut environment — both good and bad — caprylic acid can actually do the opposite, helping prevent an imbalance between the presence of various bacteria.

② Fights Candida

When it comes to fighting candida the natural way, look no further than caprylic acid. Candida is a condition that occurs when an overgrowth of yeast fungus develops in your gut. It's very common, especially among women, and is associated with uncomfortable **Candida symptoms** like abdominal bloating, constipation, fatigue, irritable bowel syndrome, depression and sugar cravings.

Because caprylic acid acts as a natural yeast-fighting agent, it's believed that it can penetrate the cell membranes of candida yeast cells and cause them to die off, detoxifying the digestive tract and speeding up the healing process.

③ Helps Prevent and Treat Yeast Infections

Aside from candida, yeast can cause other types of internal or external yeast infections that show up on the skin, genitals, toes and elsewhere. Caprylic acid can help **get rid of yeast infections** — as **toe fungus**, **oral infections**, **vaginitis in women**, **jock itch** in men and **ringworm** are all examples of yeast infections that can be prevented or treated with little to no side effects.

④ Treats Skin Infections and Acne

Considering how popular various coconut oil uses for skin have become, it's no surprise that the strong antibacterial and antimicrobial effects of caprylic acid have been proven in many human and animal studies to help improve infections that show up on the skin. Caprylic acid, along with its derivatives called monocaprylin and sodium caprylate, are capable of fighting bacteria that live on the skin and cause infections, including *Dermatophilus congolensis* and acne.

⑤ Helps Treat Inflammatory Digestive Disorders

Medium-chain triglycerides (MCTs or MCT oil) are often administered to patients with Crohn's disease or short-bowel syndrome. Up until recently, little was known about the effects of MCFAs and MCTs on intestinal inflammation, but studies now suggest that these fatty acids help suppress secretion of inflammatory enzymes and cells, reducing Crohn's symptoms like pain, bloating, bleeding and bowel problems.

⑥ Reduces Risk for Antibiotic Resistance

Concerns regarding antibiotic resistance worldwide are on the rise, which has led health experts to seek out natural alternative therapeutic approaches to antibiotics for treatment of infections in both humans and animals.

One of the main concerns for using chemical antibiotics to treat infections or viruses is that it raises the risk for antibiotic resistance over time. As harmful pathogens and bacteria in the body become resistant to drugs and mutate in order to survive, we have to turn to other options to treat illnesses — sometimes these options come at a much higher price, require a longer duration and cause serious side effects.

Some proven coconut oil benefits include:

- boosting the immune system
- preventing cancer
- healing skin and acne
- helping with weight loss
- healing leaky gut syndrome
- reducing allergies
- improving heart health
- supporting the thyroid gland
- reducing fatigue
- and many more

NATURAL HEALTH PRODUCTS

CAPRYLATE

caprylic acid complex

90 Capsules

PRODUCT INFORMATION:

Each capsule provides:
Calcium Caprylate
Magnesium Caprylate

492mg
356mg

INGREDIENTS: Calcium Caprylate; Magnesium Caprylate; Vegetarian Capsule Shell: Hydroxypropyl Methylcellulose (HPMC); Anti-caking Agent: Magnesium Stearate (vegetable source); Anti-caking Agent: Silicon Dioxide

DIRECTIONS: Take 1 capsule, 3 times per day or as advised.
Do not exceed the recommended daily intake. Food supplements should not be used as a substitute for a varied diet and healthy lifestyle.

This product is **NOT** tested on animals.

FOOD SUPPLEMENT

Manufactured in the UK under GMP for:
G.M.G. Da Vinci Health Ltd
Larnaca, Cyprus
www.worldwidehealthcenter.net
Tel: (+357) 24 82 22 33

Code: CAPRYLATE 2534 | Qty: 90 Capsules

STORAGE: Store in a cool dry place, out of reach of children. Best before end on the base
